

The Life Cycle of a Flower

When explaining how plants grow,

There are things you need to know.

In the beginning all you need,

Is a simple, unsuspecting seed.

Giving the plant the ideal condition,

To germinate must be your mission.

Water, light and soil to sow,

Will help your little plant to grow.

Within no time, you will see a shoot,

Followed by a searching root.

The root will anchor to the ground,

The sprout reaches and light is found.

The plant grows taller, grows a stem,

Growing thicker and thicker, again and again.
